

Performance Tuning – Spark Cluster Code Execution Internals

Performance Tuning – Too Many Small Files Issue

Recommended File Size between **128 MB To 1GB**

Always Use Delta Lake Table as it always stores data in optimal size

Use OPTIMIZE and Z-ORDER BY ,Select HIGH CARDINALITY(Unique Values) columns(MAX 4 COLUMNS RECOMMENDED) for Z-ORDER

OPTIMIZE pricing_analytics.gold.reporting_fact_daily_pricing_gold
ZORDER BY (DATE_ID,ROW_ID)

AUTO OPTIMIZE set at table or Spark Session Level tries to store file sizes in 128MB

-- AUTO OPTIMIZE Table properties

TBLPROPERTIES (' delta.autoOptimize.optimizeWrite ' = 'true',
delta.autoOptimize.autoCompact ' = 'true)

-- AUTO OPTIMIZE In Spark session conf for all new tables

set spark.databricks.delta.properties.defaults.autoOptimize.optimizeWrite =
true

set spark.databricks.delta.properties.defaults.autoOptimize.autoCompact =
true

PARTITINING Table Using Low Cardinality Columns(More Duplicates) not recommended for the table size less than 1 TB

Individual Delta Lake Table File Size can be set using delta.targetFileSize = Size in Bytes

TBLPROPERTIES (' delta.targetFileSize ' = '1600000')
